

Experiment 2

Methods for HNP solving

Hypothesis

Some of those are better than others.

Setup

- Compare CVP(Babai, BKZ), CVP(Rounding, BKZ), SVP(BKZ), SVP(Sieving BKZ) on some interesting part of the parameter space, where the methods start to work.

Outputs

- Similar to the first experiment, or even exact.

Visualizations

- The same as in the first experiment.

Why?

- To know which method to use further.
